'War Dialing' Tool Exposes Zoom's Password Problems

SecKC members' creation of zWarDial has found a workaround to evade Zoom's attempts to block automated meeting scans.

Trent Lo, a security professional and co-founder of [SecKC](#), and fellow SecKC members recently created zWarDial and discovered that they were able to breach Zoom meetings.

"Zoom recently said they fixed this but I'm using a totally different URL and passing a cookie along with that URL," Lo said ...

In a nutshell, the fix is to implement a password for all of your meetings.
